INFORMATION EDGE LIGHTS THE LAMP: FREE ENTERPRISE GRADE OLAP FOR MYSQL 5.0

TeraSolve Standard lights the LAMP for Enterprise BI applications and is the first free and scaleable OLAP technology in the world.

Information Edge the leading innovator of BI analytical applications is launching TeraSolve Standard for MySQL 5.0 at the MySQL User Conference 2006. TeraSolve Standard is a free patented OLAP technology that makes MySQL OLAP aware.

“We are excited at the emergence of the LAMP architecture and being able to provide BI functionality within MySQL 5.0” said Paul Speers, VP of Sales and Marketing. The LAMP stack and Version 5.0 of MySQL provides exceptional new functionality that paves the way for larger adoption at the Enterprise level”

“Combining our unique OLAP functionality and unmatched scalability with the world’s most popular open source database is a powerful solution for the MySQL user community. TeraSolve is the missing link enabling an Enterprise “compete and beat” commercial strategy against Microsoft and Oracle” said Speers.

Cont:...

TeraSolve Standard is patented technology that has many proven advantages over traditional OLAP technology delivering:

Scalability & Speed – unmatched scalability on loading raw data volumes and handling complexity.

Reliability & Accuracy – data is stored within MySQL and all the fault tolerant capabilities of MySQL are retained, our patented calculation system guarantees accuracy.

Low TCO - build one cube once, no database explosion, no pre aggregation totally managed and administered by MySQL DBA's

Real Time Information – All queries and calculations done in real time no batch mode required.

“Developing our global success within Government, Transport and Telco sectors we are recruiting SI Partners and adding global reach for our rapidly expanding service delivery team. In the coming weeks we are embarking on an aggressive online sales & marketing campaign against the main players, this is truly a disruptive technology” Speers adds.
